MOBILE VIBRATION TOOL – DEVICE

Movito D™

Movito D™: for Measuring Vibrations to Stay Healthy and Fit

The EU directive 2002/44/EC mandates protection of workers from health-endangering vibrations. For employers, this means that they must monitor the vibrations their employees are exposed to and – if required – take action to reduce them. For these purposes GRAMMER, together with the development partner Wölfel, developed an innovative new vibration dosimeter: the Grammer Movito D™.

The Grammer Movito D™ is exceptionally user-friendly: easy to attach to the driver seat, once there it continuously measures the vibration load and outputs visual and audible signals if it reaches potentially hazardous levels.

It is a battery-powered “standalone solution”. The Grammer Movito D™ can be mounted on different vehicle types and seat models. It can be parametrized to meet requirements in any EU country.

Technical Data

- Dimensions: approx. 106 x 76 x 27 mm
- Weight: approx. 200 g
- Rechargeable batteries: “Micro AA” (2x)
- Operating time: minimum 12 hours
- Interface: USB 1.1
- Operating temperature range: –10°C to +50°C
- Data output, storage and archiving in MS® Excel
- Software for all EU countries

Supplied Accessories

- USB cable
- Software CD for Windows XP®
- Operating instructions
- “Micro AA” rechargeable batteries (2x)
- Attachment strips (4x)
- Cleaning tissues (3x)
